EMBLEM

MOTTO

NICKNAME

OPERATIONS

The role of the 125th Weather Flight has changed significantly over the past few years. Prior to 1979, the flight was involved with providing weather support to the pilots of the 138th TFGP. During Annual Training 1975, the flight accompanied the group to Volk Field, WI where

they provided a variety of weather support to the pilots from Tulsa as well as those from Des Moines, IA. After 1975, the 125th began going to active duty bases for their Annual Training.

During these times, the members of the unit would go in and run the base weather stations at such places as Bergstrom AFB, TX and Vance AFB, OK. In 1979, the most significant change took place when the mission of the 125th Weather Flight was changed to Army support and the members of the unit began to learn the common soldier skills that they would need in a tactical situation. Since that time, the 125th Weather Flight has supported the 45th Infantry Brigade, OKARNG which is headquartered in Edmond, OK.

For five Annual Training periods in a row, the 125th Weather Flight accompanied the 45th Brigade to Fort Chaffee, AR. The first of these was in 1980 when the mass of Cuban refugees was located at Fort Chaffee. Then in 1985, Annual Training was performed at Camp Gruber, OK which is located near Muskogee, OK. In our Army support role, we provide weather support to the commander of the 45th Brigade and to his staff, which will allow them to integrate weather into their plans and operations. The members of the 125th Weather Flight are no longer just weathermen, they are also highly trained individuals that are at home in the field environment of the modern day infantry soldier.
