

ENGINEERING INSTALLATIONS CENTER

When the Air Force Communications Command established an Engineering Installations Center (EIC) at the Oklahoma City Air Force Station in 1981, the Directorate of Distribution established a new consolidated storage facility for communications equipment. In 1981 the flow of materials into Tinker began. By year's end the ALC had closed a large storage facility at Sacramento ALC and had begun consolidating stocks from another depot at Griffiss AFB, New York. Tinker was a suitable, convenient place for consolidated storage because of its central location and because the EIC could direct the quick transfer of communications equipment overseas through Tinker's inland aerial port of entry.

Jun 1 1981 The Air Force Communications Command's Engineering Installation Center was activated at the Oklahoma City Air Force Station. At the same time, the 2002nd Southern Communications Area was deactivated. The first commander of the new EIC was Col. David B.

Bartholomew.
